Art Unit: 1711

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Carr.

Carr discloses a polyurethane resin comprising a prepolymer of methylene-bis(cyclohexyl isocyanate) (see example 2 of page 3) and polyether diols of 750-1500 molecular weight (page 2, col. 2, line 25), which is then reacted with methylene-bis-(chloroaniline) (page 2, col. 2, line 55). He makes the prepolymer, in the examples, at an NCO/OH ratio of about 3/1, and he shows the prepolymer to have an NCO content of 5-7 wt. % (page 2, col. 1, line 46). The prepolymer and amine chain extender are reacted at preferably an amine/isocyanate ratio of 0.9/1 (page 3, top col. 1).

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carr in view of Slagel and Smith.

5. Carr discloses the polyurethane of the claims (see above rejection) but doesn't show using it to make polarized lenses.

Art Unit: 1711

6. Slagel shows the same polyurethane resin made from a prepolymer of methylene-bis(cyclohexyl isocyanate) and a diol having a molecular weight of 1000 at an NCO/OH ratio of 3/1 (see example 1). He chain extends the prepolymer with an aromatic diamine. He teaches using this polyurethane for lens applications (see abstract).

7. Smith teaches that polarized lenses can be made by bonding a polarized sheet to the surface of a plastic lens (see abstract).

8. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the polyurethane of Carr for a polarized lens because Slagel shows how a similar polyurethane can be used for lenses, and Smith shows that plastic lenses can easily be made into polarized lenses.

9. Applicant's arguments filed 01-15-03 have been fully considered but they are not persuasive. The applicants argue that Carr doesn't show the same polyol molecular weight or prepolymer NCO content. Carr isn't limited to his example. The disclosure overlaps with the claims.

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

Art Unit: 1711

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
